

# Azure Email Communication Services

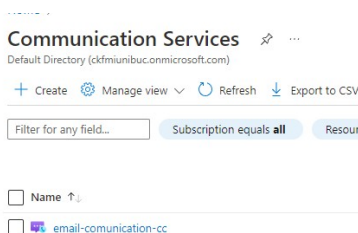

- Cautati Email Communication Services in Azure si creati un nou serviciu

- Urmariti [documentatia](#) si [quickstart-ul](#)
- Creati un nou subdomeniu

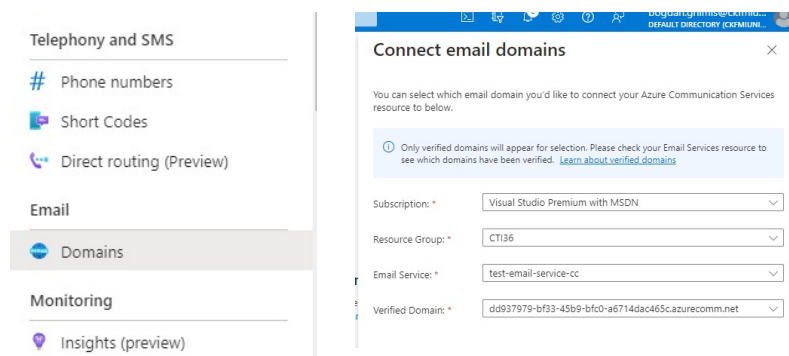

- Cautati Communication Services in Azure si creati un nou serviciu (autentificare)

- Retineti adresa de email primita (cea din dreapta cu DoNotReply):

- In partea stanga selectati Email → Domains si conectati subdomeniul creat

- In partea stanga selectati Settings → Keys pentru a gasi string-ul de conectare

- Folositi urmatoarul cod Python pentru a trimite mail-uri (modificati <CAPS LOCK>)

```
$ python3 -m venv venv
```

```
$ source venv/bin/activate
```

```
$ pip install azure-communication-email
```

```
$ cat main.py
```

```
from azure.communication.email import EmailClient, EmailContent, EmailAddress,
EmailMessage, EmailRecipients
```

```
connection_string = "<CONNECTION_STRING>"
```

```
client = EmailClient.from_connection_string(connection_string);
```

```
content = EmailContent(
    subject="This is the subject",
    plain_text="This is the body",
    html= "<html><h1>This is the body</h1></html>",
)
```

```
address = EmailAddress(email="<ADRESA_EMAIL>", display_name="Customer
Name")
```

```
message = EmailMessage(
    sender="<DONOTREPLY@...>",
    content=content,
    recipients=EmailRecipients(to=[address])
)
```

```
response = client.send(message)
print(response)
```

- Verificati-va mail-ul (:
